

## SPECIFICATION

Please substitute the following paragraph for lines 11-20 on page 7 of the specification:

B1  
The present invention replaces some or all of the individual gauges illustrated in Figure 2 by various display units. For example, Figure 3 illustrates an exemplary display 300, which is a single CRT or LCD display unit including graphical representations of an attitude indicator, airspeed indicator, altimeter, and horizontal situation indicator which have been rendered in separate areas of display 300 by a computer. Specifically, area 302 contains a rendering of an attitude indicator, area 304 displays the airspeed, altimeter 306 displays the altitude, and heading source indicator (HSI) 308 shows the heading of the aircraft. For further discussion of display 300, see the related patent application entitled, "System and Method for Flight Mode Annunciators," filed on October 6, 2000 as serial number 09/679,924.
